ŞEHZADE GEMSTONE CHINI TILE FROM IZNIK TILES AND CERAMICS

Posted on 06/21/2015 by Pat Anthony

This outstanding ceramic tile line is made from crystal quartz and colored with a crystal-based glaze derived from organic metal oxide pigments. The tiles are handmade following the same traditional production methods used for a special quality of ceramics produced during the 15th and 16th centuries in Iznik, Turkey.

The bright colors reflect the shades of semi-valuable gems, for example coral red, malachite or turquoise green, and the dark blue of lapis lazuli. Due to their high quartz composition (85%) and the glassy quartz glaze the tiles are extremely hard and durable.

These gemstone tiles are available in 56 brilliant colors and in various sizes and shapes. They can be installed on walls, floors and ceilings and are applicable for both interior and exterior application.
